HTML

HTML is an acronym for HyperText Markup Language, and it is the standard language for creating web-pages. Every web page you surf on your browser is built using HTML. The primary use of HTML to provide a proper structure to the web-page so all the content or data of the page could represent adequately. A stand-alone HTML can create only static and skeleton looking black and white pages, but with the help of CSS and JavaScript, we can create a more interactive and intuitive web-page. When we try to visit a website or click on the link, we basically request the server to show us the page, then the server acts on our request and sends us an appropriate HTML document as a response. Then this HTML document is parsed by the browser, and we are able to see the content.

HTML document

```
<!DOCTYPE html>
<html>
<head>
<title>Page Title</title>
</head>
<body>

<h1>This is a Heading</h1>
<p>This is a paragraph.</p>

</body>
</html>
```

References

- All document in the page is taken from [HTML Tutorial](#)
